<b>Chapter 13.</b> The Palestinian Economy: 13/1 .....	<b>169</b>

---

## HISTORICAL BACKGROUND

---

In their meeting of February 1980, the Seven Members Committee of Governors of Arab Central Banks and Monetary Authorities recommended that the Arab Monetary Fund, be in charge of preparing a Joint Annual Report on economic developments in the Arab region, in cooperation with the General Secretariat of the Arab League and other Arab regional specialized institutions, in order to avoid duplicating the efforts exerted by each of them and to provide a unified source of data and information on the Arab economies. The Joint Report provides Arab ministers of Economy and Finance, Central Bank governors, Arab Monetary Authorities, and other interested stakeholders in Arab economic affairs with information about recent developments in the economies of Arab countries to enable them to discuss key issues facing the Arab region, whether in terms of their relationships with each other or their relationships with other countries of the world.

The first edition of the Joint Arab Economic Report was issued in August 1980, the result of fruitful cooperation with the Arab Fund for Economic and Social Development (AFESD). The General Secretariat of the League for Arab States joined the cooperation effort starting from the 2<sup>nd</sup> edition of the Report, and the Organization of Arab Petroleum Exporting Countries (OAPEC) from the 3<sup>rd</sup> edition.

The four institutions participating in preparing the Report hope to have been successful in achieving the objective of describing the Arab economic situation, practically, objectively, and neutrally, within a concise framework that reflects the most important features of Arab economies' trends. Therefore, this may provide useful material for decision makers and researchers interested in the economic affairs and development of the Arab region. The participating institutions also hope that such analytical efforts be enhanced continuously, benefiting from comments and suggestions by various stakeholders. To this end, they hope the Report becomes a main reference to follow up developments in Arab economies and to assist in the economic policy-making that promotes development and stability in the Arab region at large and supports the joint Arab action and cooperation,

## PREFACE

---

Edition 32 of the Joint Arab Economic Report 2012 (JAER), as is the case since its first edition published in 1980, addresses economic developments in the Arab economies.

This report is the result of fruitful cooperation among Arab institutions. It is co-authored by the General Secretariat of the League of Arab States, Arab Fund for Economic and Social Development, Arab Monetary Fund and Organization of Arab Petroleum Exporting Countries (OAPEC). Each of these four institutions prepares their respective chapters annually, in line with the agreed upon concept note. Meanwhile, the Arab Monetary Fund has held editing and publishing responsibilities since 1980.

A draft Report is submitted, for limited circulation, to enable member states to provide comments and feedback, during the annual September meeting of the Governors Arab Central Banks and Monetary Authorities as well as to the September meeting of the Economic and Social Council of Ministers. In light of such comments and suggestions, the Arab Monetary Fund, in coordination with the other participating institutions, edits the final draft and publishes the Report before the year's end.

The participating institutions endeavor to ensure that the Report reflects objectively and scientifically the current situations of Arab economies, drawing on the most recently available data and information, as well as an established methodology in the preparation of the Report.

The JAER authors collect the required data and information from reliable national sources and make necessary calculations for the missing data, in order to submit the report on time. The Arab official statistical authorities have responded periodically by completing the Report Questionnaire. We hope this positive stance will continue to enable the Report authors to provide an overall view on the Arab economies.

In terms of the Report methodology and its development, the participating institutions ensure that the individual Chapters provide the analysis of Arab economic conditions using key indicators, after a thematic classification of the Arab countries to facilitate comparative analysis. To this end, the figures are calculated using the US dollar at the exchange rates provided by the member country for the Report purposes.

Finally, each year the JAER includes a special thematic Chapter, deals with a major economic issue, and the contents of the other Chapters should reflect this issue, as far as possible.

We hope that this JAER issue will, like the previous editions, serve as a useful reference for decision makers and economic analysts as well as researchers.

# Basic Indicators for Arab Countries

## in 2011

### **Area**

Total Area	14.2	(Million Km <sup>2</sup> )
Arab Region Area to Global Area Ratio	10.2	Percent

### **Population and Work Force**

Total Arab Population	362	(Million)
Total Arab Population to World Population Ratio	5.2	(Percent)
Arab Total Work Force	122	(Million Workers in 2009)
Average Unemployment Rate	16.0	(Percent)

### **Gross Domestic Product**

Arab GDP Value at Current Prices	2,365	(Billion US\$)
Annual Growth Rate (at current prices)	18.0	(Percent)
Annual Growth Rate (at constant prices)	2.4	(Percent)
GDP Per Capita (at factor cost)	6,731	(US \$)
Agriculture Added Value to GDP Ratio	5.6	(Percent)
Extractive Added Value to GDP Ratio	40.7	(Percent)
Manufacturing Added Value to GDP Ratio	9.0	(Percent)
Services Added Value to GDP Ratio	38.0	(Percent)

### **Oil & Natural Gas**

Arab Oil Reserves to World Reserves Ratio	57.5	(Percent)
Arab Natural Gas Reserves to World Reserves Ratio	28.2	(Percent)
Arab Crude Oil Production	22.4	(Million barrels per day)
Arab Crude Oil Production to World Production Ratio	31.0	(Percent)
Arab Natural Gas Production to World Production Ratio	14.4	(Percent in 2009)
Proceeds of Oil Exports (estimated at current prices)	667.5	(Billion US\$)

### **Trade**

Arab Merchandise Exports (FOB)	1,195.8	(Billion US\$)
Arab Merchandise Exports to World Exports Ratio	6.6	(Percent)
Arab Merchandise Imports (CIF)	752.6	(Billion US\$)
Arab Merchandise Imports to World Imports Ratio	4.1	(Percent)
Intra-Arab Exports	95.3	(Billion US\$)
Intra-Arab Exports to Total Arab Exports Ratio	8.0	(Percent)

### **External Official Reserves\***

Value	1,114.6	(Billion US\$)
Year Average Official Reserves over Year Average Imports (FOB)	19.7	(Month)

### **External Public Debt of Arab Borrowing Countries**

Value	176.2	(Billion US\$)
Value of Debt Service	15.9	(Billion US\$)
Debt Service to GDP Ratio	20.0	(Percent)
Debt Service to Exports of Merchandise & Services Ratio	4.9	(Percent)

\* Excluding Monetary Gold.

# **The Joint Arab Economic Report 2012**

## **Overview**

The Joint Arab Economic Report 2012 presents an overview of economic developments taken place in the Arab countries during 2011. It begins with a summary review of the performance of the global economy in Chapter 1 followed by economic and social developments in Arab countries in Chapter 2. Chapter 3 and 4 review developments in the agricultural and the industrial Sectors in Arab countries respectively, while Chapter 5 deals with developments in oil and energy sectors. Chapter 6 reviews public finance developments and Chapter 7 addresses developments in money, banking and financial markets. Chapter 8 outlines developments in international and intra-regional trade, and Chapter 9 describes developments in the balances of payments, external debt and exchange rates in Arab countries.

Chapter 10 is the thematic chapter in this report dealing with access to financial and banking services and finance opportunities and challenges in Arab countries. This chapter is followed by a presentation of Arab and international development assistance. Chapter 12 is a manifestation to pan-Arab economic cooperation focusing this time on Arab cooperation in combating desertification. Chapter 13 concludes the report by describing developments in the Palestinian economy in 2011. Finally, tables relevant to each chapter are annexed to the report.

### **(Chapter 1)**

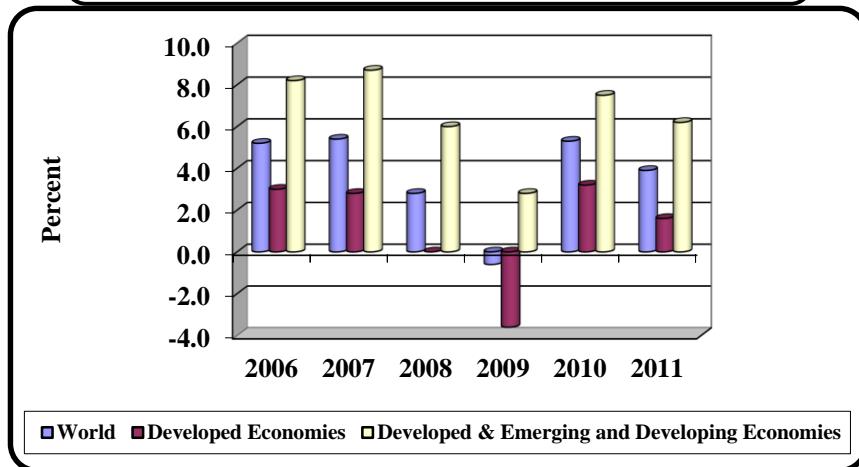

#### **Global Economic Developments in 2011**

Economic growth of the world economy slowed down in 2011 following a recovery in 2010 from the 2008–2009 global financial crisis. The major factors contributing to the weak performance of the world economy in 2011 included the Japan earthquake and Tsunami in 2011 that caused substantial destruction of infrastructure in that country. The natural disaster impacted on international production and supply chains through reductions in Japanese inputs and spare parts specially for motor industries in Europe and America. Moreover, the world economic performance in 2011 was negatively influenced by the Eurozone sovereign debt crisis. The later was aggravated by the adoption of austerity measures in a number of European countries.

---

In 2011, the world economy witnessed a real GDP growth rate of 3.9 percent compared to 5.3 percent in 2010. Among the advanced economies, the Eurozone economic growth rates declined from 1.9 percent in 2010 to 1.4 percent in 2011 and the area is expected to witness an economic recession in 2012. In America, a boost in private investment accompanied by improvements in labour market conditions in the second half of 2011 contributed to a strengthening of economic growth rate to 3 percent in 2011 compared with a rate of 1.7 percent in 2010. The slowing down of economic growth in advanced economies (Eurozone and Japan, all together representing 60 percent of the World's GDP) led to deceleration in economic growth rates of developing countries due to a decline in exports and financial flows from advanced economies. The IMF estimated that the average economic growth rate in developing and emerging economies in 2011 was 6.2 percent compared to 7.5 percent in 2010. China economic growth rate declined to 9.2 percent in 2011 as a result of a slowdown in the growth of export, investment and real estate (Annex Table 1/1 & Figure 1.1).

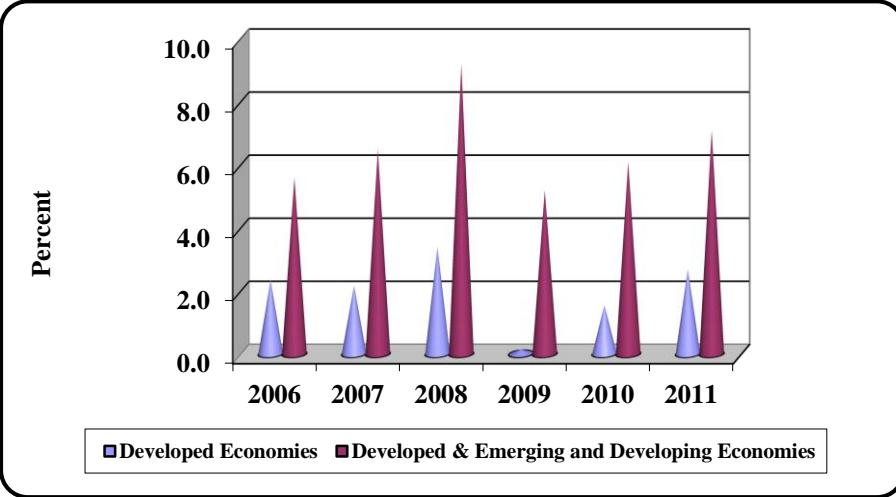

**Figure 1.1**  
**Growth Rate of World, Developed and Developing Countries Real GDP 2006-2011**

Source: See Annex Table 1/1.

The world inflation rate registered its highest average level, reflecting escalating prices of primary products such as fuel and food prices which were fueled by socio-economic unrest in the Middle Eastern countries and the rise in capital flows for speculations in primary goods markets particularly in petroleum products. Estimated inflation rate in 2011 in advanced countries was about 2.7 percent compared to 1.5 percent in 2010 while estimated inflation rate in developing and emerging countries was 7.1 percent in 2011 compared to 6.1 percent in 2010 for this group of countries (Annex Table 1/2 &Figure 1.2).

**Figure 1.2**  
**Inflation in Developed & Developing Countries**  
**2006-2011**

Source: See Annex Table 1/2.

Unemployment rates began to decline in some of the advanced countries. In the United States of America, the labour market performance improved gradually as the unemployment rate fell marginally from 9.6 percent in 2010 to 9 percent in 2011. Similarly, labour market conditions improved in Germany as the unemployment rate declined from about 7.1 percent in 2010 to about 6 percent in 2011. However, unemployment rates in France, Italy and the United Kingdom remained high at the rates of 9.7 percent, 8.4 percent and 8 percent during the same period respectively (Annex Table 1/3).

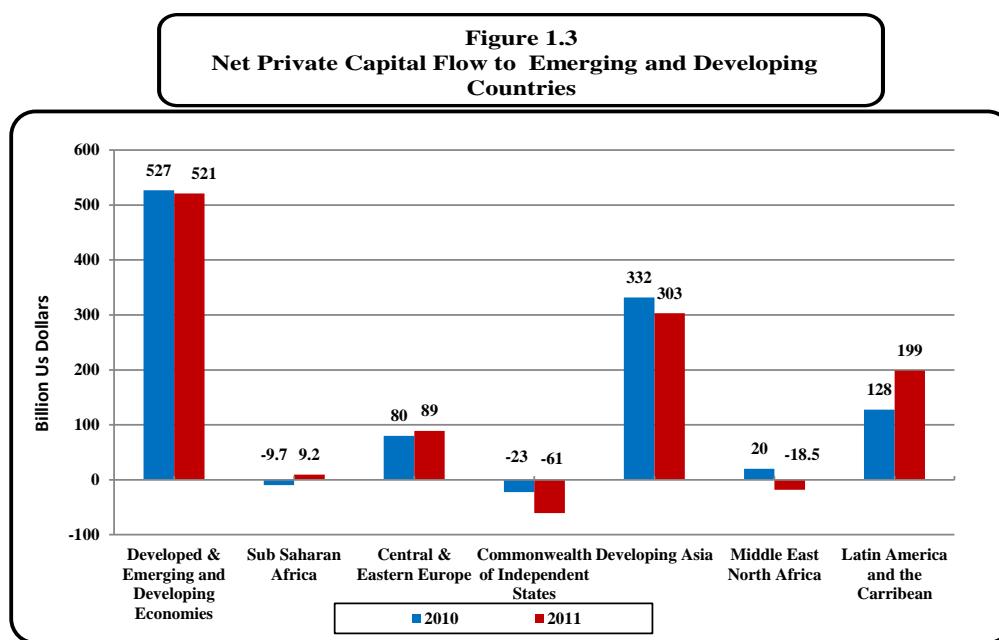

Monetary authorities in many countries around the world adopted expansionary monetary policies through maintaining low interest rates. Furthermore, many of these authorities continued to relax quantitative restrictions and expand liquidity to stimulate credit and support economic growth in the face of a shrinking the fiscal space available to governments of these countries for implementation of expansionary fiscal policy in the light of high outstanding levels of public debt. Short term interest rates in the USA remained at their levels in 2010 whereas the rates declined in Japan. In the Eurozone, the sovereign debt crisis in some countries led to liquidity shortages in banks resulting in high short term interest rates. Long term interest rates government long term bond prices, recorded variation in trends across the advanced countries. The interest rates declined in the USA and the United Kingdom, while they remained stable in Japan and rose in the Eurozone (Annex Table 1/4).

International trade growth slowed down in 2011 to reach 6.3 percent compared to 14.3 percent in 2010 influenced by the Eurozone sovereign debt crisis, the Japan Tsunami and the

Thai floods. Decline in a number of primary commodity prices, save for oil and food prices, led to the decline in the value of exports in many of the developing and emerging markets in comparison with 2010 levels (Annex Table 1/5).

Global external imbalances in current account balances declined noticeably in 2011 due to a tangible reduction in the surplus of the Chinese current account, as proportion of GDP from 10 percent of GDP in 2007 to a mere 3 percent of GDP in 2011. This can be attributed to the rebalancing policy adopted by China that relies more on domestic demand to stimulate economic growth so as to reduce dependence on external demand. On the other hand, the remarkable growth of U.S. exports in 2011 contributed alleviating the global imbalances. With respect to the developing countries and emerging market economies, the current account surplus of the Middle East and North African countries improved on the back of rising oil exports (Annex Table 1/6).

Foreign private financial inflows were highly influenced by the slowdown in economic activity of capital exporting countries and repercussions of the Eurozone sovereign debt crisis (Annex Table 1/7 &Figure 1.3).

Source: See Annex Table 1/7).

Many of the developing countries registered capital outflows in 2011 in particular of foreign assets of the European banks and financial institutions to strengthen their balance sheets. Recent data indicated a decline in net private financial flows to developing countries to about US\$ 521 billion in 2011 compared to 527 billion dollars in 2010. With regard to external indebtedness, the total external public debt owed by developing countries and other emerging market economies rose in 2011 and all the sub-groups of developing countries recorded an increase in external debt.

Exchange rates of the world major currencies experienced significant fluctuations, influenced by a number of economic factors mentioned earlier. Both the euro and the Swiss franc, as safe havens, rose against the dollar. Significant appreciation of these currencies had a negative impact on the activity of exporters in some of these countries. In contrast, the U.S. dollar found strong support during the second half of the year in the light of the negative effects of the sovereign debt crisis on the euro. The Japanese Yen was influenced negatively in the aftermath of the earthquake that resulted in slow growth and decline in Japanese exports. In addition to that, the Swiss central bank intervened to ensure the stability of the Swiss franc against the dollar. All these factors lifted the levels of international demand for the dollar, which in turn, boosted the dollar gains against other major currencies, besides the relative improvement in the key performance indicators of the U.S. economy during the second half of 2011.

## **(Chapter 2)**

### **Economic and Social Developments in Arab Countries**

#### **Macroeconomic Developments**

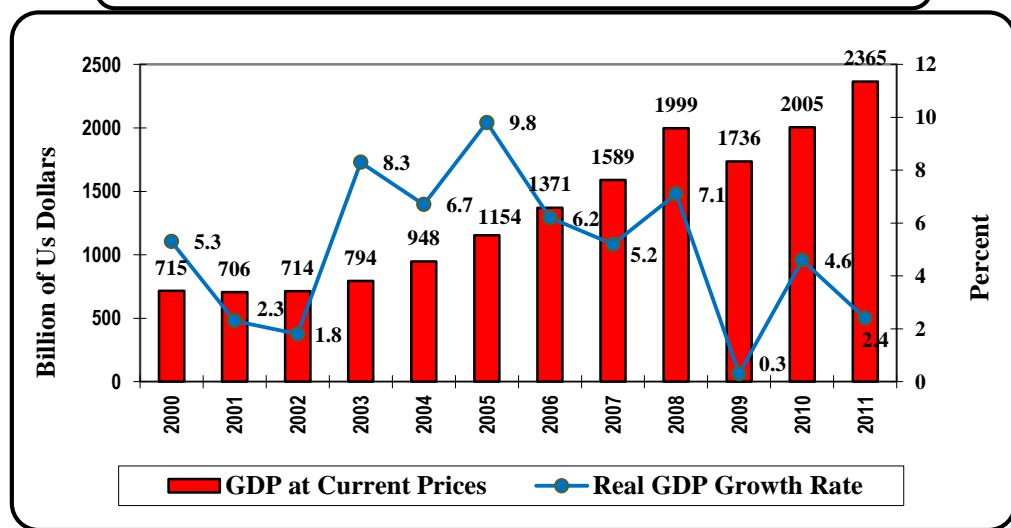

Economic performance of Arab Countries in 2011 was affected by major factors most importantly were the incidents associated with the historical political transition in a number of Arab Countries such as Tunisia, Egypt, Libya, Syria and Yemen. Repercussions of these political events influenced the other Arab countries. Political events have led to unprecedented decline in total output, exports, tourism flows, FDI inflows and decline in workers' remittance, this in turn led to economic recession in most of the countries that witnessed political unrest in 2011.

Oil exporting countries, i.e. the GCC group, Algeria and Iraq, recorded high rates of economic growth on the back rising oil international prices in 2011. By contrast, oil importing countries such as Jordan, Lebanon and Morocco were influenced negatively by decline in Eurozone demand and economic activity as well as spill over impact of the countries in transition.

GDP in Arab countries as a group increased from US\$ 2 trillion in 2010 to US\$ 2.37 trillion in 2011. GDP growth rate in current prices for the Arab countries as a group rose from 15.5 percent in 2010 to 18.0 percent in 2011. Furthermore, average GDP per capita in Arab countries increased from US\$ 5,842 in 2010 to US\$ 6,731 in 2011. However, economic performance among the countries of the region varied substantially.

However, GDP growth in constant prices declined from 4.6 percent in 2010 to 2.4 percent in 2011. This was attributed to contraction in GDP in countries that experienced political crisis and their neighboring countries (Annex Table 2/1,2/2 & Figure 2.1).

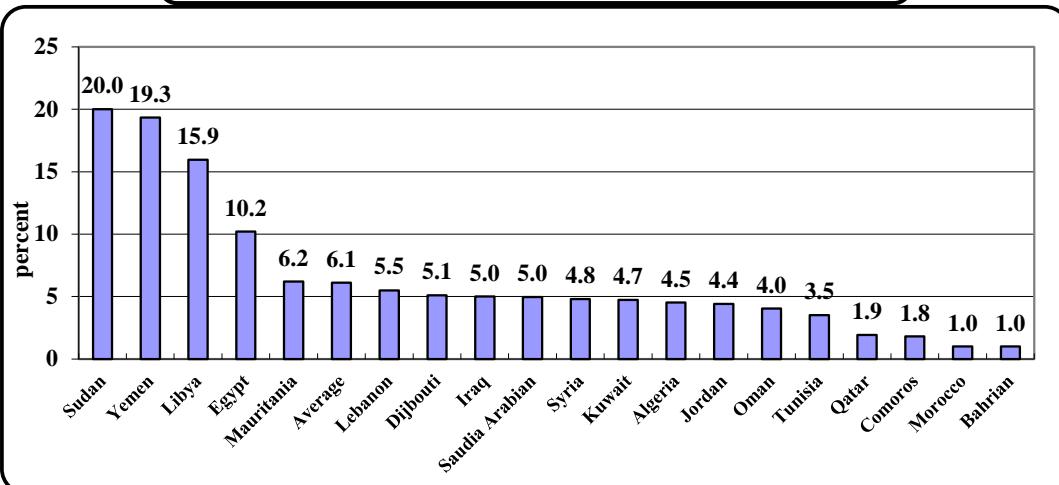

**Figure 2.1**  
**GDP at Current Prices & Real GDP Growth Rate in Arab Countries**  
**2000-2011**

Source: See Annex Table 2.2.

In addition, inflationary pressures in most of Arab countries increased as average inflation rate jumped to 6.1 percent in 2011 compared to 4.4 percent in 2010 (Figure 2.2).

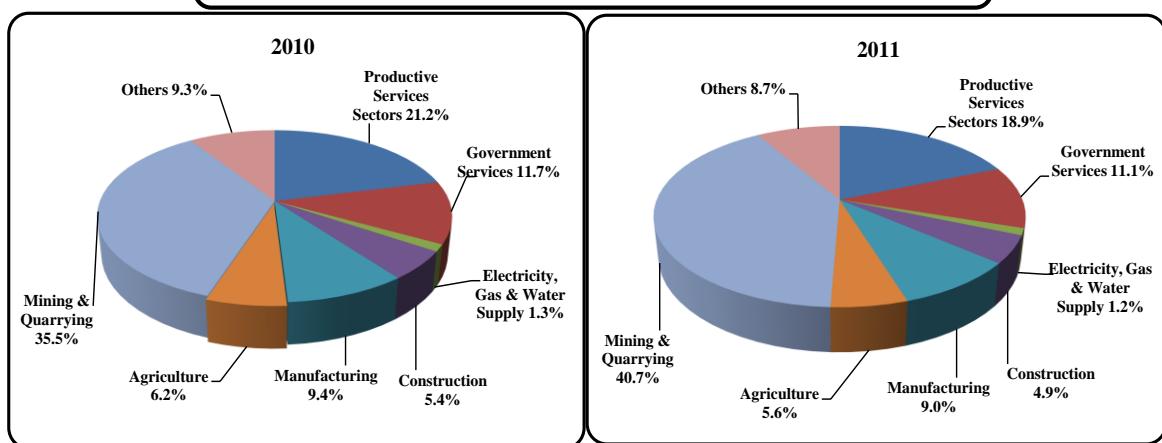

**Figure 2.2**  
**Inflation in Arab countries in 2011**

Source: Joint Arab Economic Report, Questionnaire of 2012, and other National Resource.

With respect to developments by sector in 2011, mining and quarrying sector contribution to GDP in Arab countries rose to 40.7 percent on the back of rising in international oil prices. With regard to expenditures in Arab countries, the share of the final consumption in GDP including both private and public consumptions, declined from 63.1 percent in 2010 to 59.2 percent in 2011. Furthermore, the share of investment in GDP receded from 26.1 percent in 2010 to 23.5 percent in 2011, and the investment growth rate receded to 6.1 percent as a result of decline in investment in a number of Arab countries due to social and political unrest in these countries. Despite the decline in the shares of consumption and investment expenditures in the GDP on the one hand and a rise in export coverage for import of goods and services for Arab countries as a group from 126.8 percent in 2010 to 145.3 percent in 2011 on the other hand, there was a widening of the resource gap as percentage of GDP in Arab countries from 10.8 percent in 2010 to 17.3 percent in 2011 (Annex Table 2/3, 2/4, 2/5, 2/6 & Figure 2.3).

**Figure 2.3**  
**Structure of Arab Domestic product by Main Economic Activity**

Source: See Annex Table 2/3, 2/4, 2/5, 2/6.

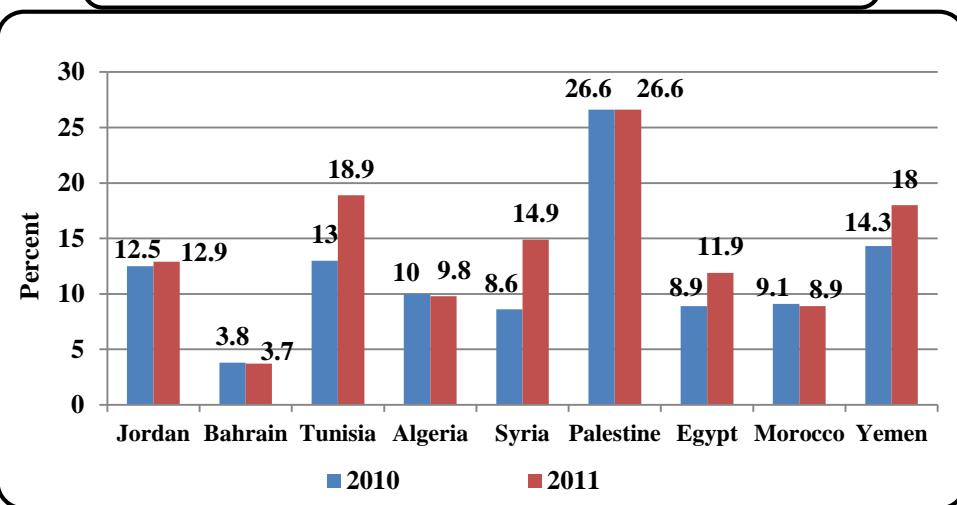

With respect to poverty and income distribution indicators in Arab countries, the region is among those regions with relatively low poverty levels. However, the real size of the poverty and its numerous implications in the region cannot be captured by the reported indicators of income poverty. Furthermore, indicators of social coherence have shown existence of different aspects of inequality with respect to basic education and health services and unequal opportunities in living decent life for all member of the community specially in low income Arab countries (Annex Table 2.7).

## Social Developments

Despite noticeable progress in the majority of Arab countries in achieving the Millennium Development Goals (MDGs), particularly, in terms of education, healthcare, equality between the two sexes (Gender Equality), and fighting poverty, yet, most of these countries face major challenges regarding high levels of population growth rates, high unemployment rates, lack of reform in education system and deficiency in human resource capabilities. The Arab countries are classified according to the human development index (HDI) among countries with medium level of HDI as many countries in the region suffer from low levels of human development in particular in less developing ones (See the UNDP Human Development Report 2012). Total population of Arab countries in 2011 was about 362 million inhabitants, with population growth rate of 2.4 percent and an increase in population by 8 million inhabitants in 2011 (Annex Table 2.8).

Labour force in Arab countries in 2010 was about 122 million workers. This was equivalent to 34.5 percent of total population in Arab countries in that year. Low levels of labour force size in this region compared to others is due to high number of population under 15 years old and modest level of women participation in labour market despite improving trends in the latter in the last few years. Unemployment rate in the region stood at about 16 percent and remains the highest compared with other regions of the world. The number of unemployed was about 17 million workers in 2011 out of 197 million unemployed in the world and an average unemployment rate of 6 percent globally (Annex Table 2/17, 2/18, & Figure 2.4).

**Figure : 2.4  
Unemployment Rates in Selected Arab Countries  
2010-2011**

Source: See Annex Table 2/18.

Life expectancy at birth in Arab countries rose from 45 years in 1945 to about 71 years in 2010. It can be noted that life expectancy at birth rose to an average of over 70 years in the majority of the Arab countries. Furthermore, most of the Arab countries achieved a good progress in expanding medical and social services and improving their quality. This positive development is reflected in the progress achieved in delivering health services for more than 90 percent of the population in 15 countries in the region (Annex Table 2/14, 2/15).

Regarding the progress in achieving of international goal of lowering the number of people without access to safe water to half by 2015, access to clean water is available to 90 percent of population in 12 Arab countries. However, less than 50 percent of the population of Mauritania and Somalia have access to clean water (Annex Table 2/16).

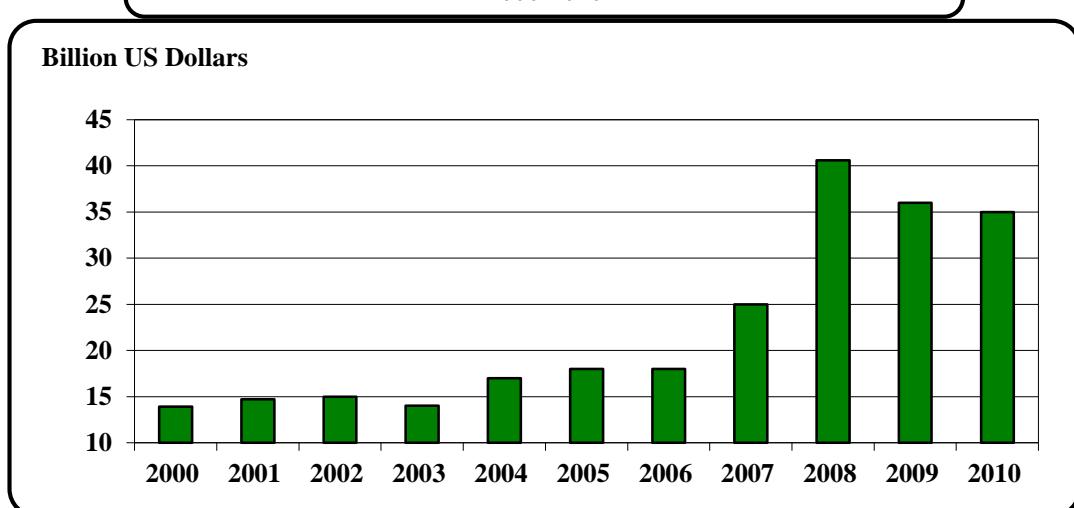

In respect of the Millennium Development Goal (MDG) of achieving universal primary education by 2015, primary school enrolment index in Arab countries has recorded noticeable improvement during the period (1990–2015). Targeted enrollment levels remained attainable in all Arab countries except Djibouti, Sudan and Somalia. Illiteracy rates in Arab countries for adult (above 15 years old) was about 27.3 percent in 2009. Illiteracy rates among the ages of (15–24) was about 12.1 percent with young male rate of 8.7 percent and young female rate of 15.6 percent in 2009. Literacy programs and schemes for education expansion contributed significantly to reducing the previous two rates compared to the 1990 rates of 20.5 percent and 38.8 percent respectively (Annex Table 2/10, 2/11, 2/12 & 2/13).

### **(Chapter 3) Agricultural Sector**

Agricultural output in Arab countries grew at a rate of about 6.7 percent in 2011 reaching US\$ 132.8 billion compared to US\$ 124.4 billion in 2010. The sector contributed to 5.6 percent of GDP in Arab countries in 2011. High growth in agricultural output was attributed to improvement in agricultural activity in a number of Arab countries. In particular, in Egypt and Algeria that enjoyed favorable climate conditions and adopted agricultural promotion policies. Per capita agricultural output in Arab countries was US\$ 378 in 2011 with an average growth rate of 4.1 percent. Plant production grew at a rate of 3.1 percent in 2011. This growth was attributed to improvement in yield of rain crops namely grain. Animal production on the other hand with its all components achieved a reasonable growth levels. Furthermore, fish production increased by 3.7 percent. The level of output achieved represents about 40 percent of potential stock of fish output in the Arab region (Annex Table 3/1, 3/7).

Recent data on foreign trade in agricultural commodities showed that Arab agricultural exports was about US\$ 17.8 billion in 2010 with a growth rate of 5.2 percent. Agricultural imports value was about US\$ 76.3 billion increasing by 14.5 percent from its previous level. Substantial rise in import value aggravated the deficit of agricultural balance of trade from 49.8 percent in 2009 58.6 percent in 2010 indicating as increase of 17.7 percent which was a substantial increase equivalent to the levels recorded during the crisis of food price hikes in 2008. A rise in agricultural trade deficit was attributed to a rise in food prices by 20 percent in 2010 and decline in agricultural output of a number of basic products in Arab countries. The outcome of the rise in agricultural imports at rates higher than exports was that the coverage of exports to imports declined from 25.4 percent in 2009 to 23.3 in 2010 (Annex Table 3/8 & Figure 3.1).

**Figure : 3.1**  
**Value of Food Gap (Net Food Imports) of Arab Countries**  
**2000-2010**

Source: See Annex Table 3/8.

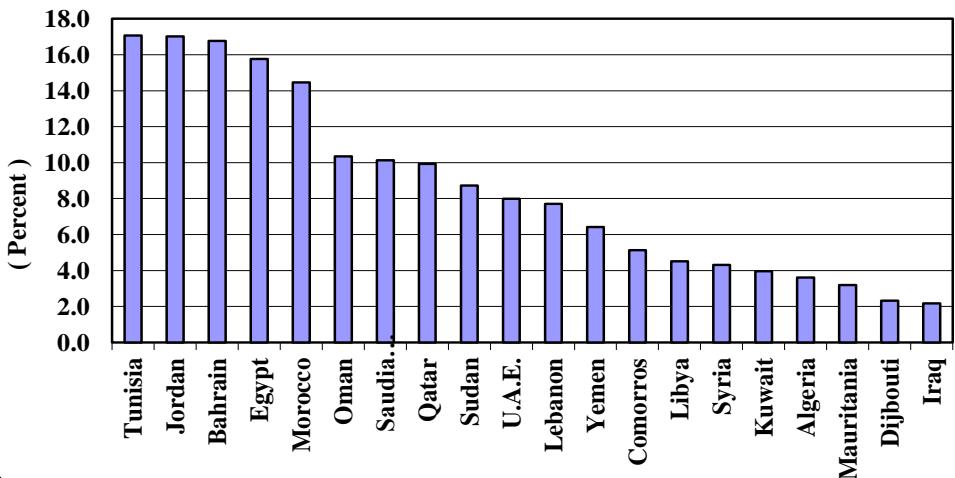

Regarding self-sufficiency in basic agricultural commodities in 2010, fish and vegetables recorded surpluses of 9.5 percent and 1.9 percent respectively. Fruit and potatoes recorded 98 percent and 99 percent levels of self-sufficiency respectively. However, beans, meat and dairy products recorded modest self-sufficiency equivalent to 58 percent, 74 percent and 78 percent respectively. Moreover, grains, cooking oil, and sugar recorded low levels of sufficiency equivalent to 47 percent, 35 percent, and 28 percent respectively (Annex Table 3/10).

## (Chapter 4) Industrial production

Industrial GDP in Arab countries grew at a rate of 30.7 percent in 2011 compared to a rate of 27.3 percent in 2010. This growth was attributed mainly to increase in the value added of the mining and quarrying industries following a rise in global oil prices in 2011. The value added in the manufacturing industries stood at 13.5 percent compared to 13.8 percent in 2010. In non-fuel mining, Mauritania led the Arab countries in terms of steel production capacity in 2011. Morocco occupied the second place in the world production of phosphate and held 10 percent of the world reserves (Annex Table 4/1, 4/2).

Recent data on the manufacturing sector in Arab countries indicated that the actual cement output declined from 167.7 million tons in 2008 to 153.5 million tons in 2009. Also, the actual clinker output declined from 150.8 million tons in 2008 to 138.1 million tons in the same period following a decline in the world demand for cement and clinker due to a slowdown in economic growth rates. Aluminum production in Arab countries is mainly based in the GCC countries. The total output of the aluminum represented about 7 percent of the world output in 2010. Production capacity of the aluminum is expected to rise to 13 percent of the world output in 2014. Iron and steel output declined in 2011 due to political crisis in the region particularly in Libya where the production came to a halt during that year (Figure 4.1).

**Figure : 4.1**  
**Share of Manufacturing Output in the GDP of Arab Countries**  
**2011**

Source: Annex Table 4/3.

Industrial employment represented 16.9 percent of total employment in Arab countries in 2010 compared to 17.6 percent in 2009. There was some variation in the share of industrial employment in total workforce in different Arab countries.

Competitiveness of Arab manufacturing products measured in terms of the ITC's International Specialization Index of Processed Products calculated for 2010, indicated that some Arab countries are gaining a comparative advantage in a number of industrial products, such as fertilizer in Jordan, Tunisia and Morocco, fishing products in Mauritania, Morocco and Yemen, and aluminum in Bahrain and the United Arab Emirates (Annex Table 4/14).

## **(Chapter 5) Oil and Energy**

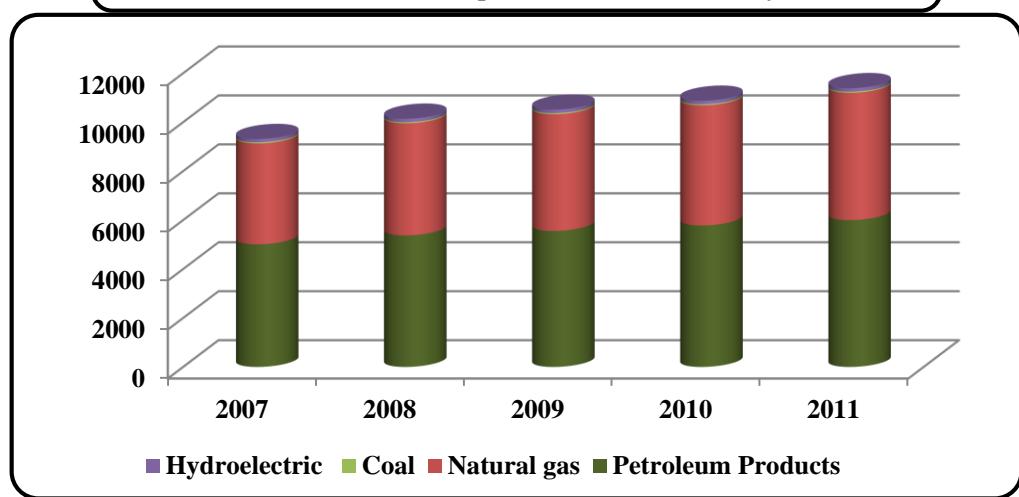

The global oil markets in 2011 registered record high levels of prices. Several factors influenced the global oil markets in 2011, the most important of which were the geopolitical developments in the Arab region, fluctuations in currency exchange rates, speculation in the commodity markets, turmoil in global financial markets in light of the worsening sovereign debt crisis in the Eurozone, slowdown in the growth of the global economy, future expectations of oil surplus capacity and inventories of world oil. Arab oil exporting countries through OPEC played a vital role in stabilizing oil price levels especially during the second half of 2011.

The world supply of oil (including crude oil and natural gas liquids) rose up by one million barrels per day to reach a total of 87.5 million barrels per day. The world demand for oil increased by a nearly identical amount to supply to reach 87.8 million barrels per day in 2011. While the share of Arab countries remained at 57.5 per cent of the estimated world proven reserves of crude oil but the Arab share of the world total natural gas proven reserves decreased slightly to 28.2 per cent in 2011.

The Arab countries achieved an increase in production of crude oil in 2011, that amounted to about 31 per cent of the world total production during the year. In contrast, the Arab share of marketed production of natural gas decreased slightly to about 14.4 per cent of total global production in 2010 (Annex Table 5/4, 5/5).

Arab countries energy consumption increased by 4.7 percent to reach 11.4 million barrels oil equivalent per day during 2011. Oil and natural gas remained the main sources of Arab countries energy requirements accounting for 98.3 percent of total energy sources (Annex Table 5/6 & Figure 5.1).

**Figure 5.1**  
**Demand for Energy in Arab Countries, 2007-2011**  
(Million of barrels equivalent of Petroleum/day)

Source: See Annex Table 5/6.

Annual rates of prices of the main export crude oil in the Arab countries increased during the year 2011. The annual average price of OPEC basket of crudes reached US\$ 107.5 per barrel, compared to an average price of US\$ 77.4 per barrel in 2010, indicating an increase of US\$ 30.1 per barrel, equivalent to an increase of about 39 per cent. Rising oil prices led to a noticeable increase in the value of oil exports in the Arab countries. Initial estimates indicated that oil exports reached about US\$ 667.5 billion in 2011, compared with US\$ 471.7 billion in 2010, therefore, up by US\$ 195.8 billion, equivalent to an increase of 41.5 per cent (Annex Table 5/8, 5/10).

## (Chapter 6) Developments in Public Finance

Rise in oil and gas prices in international markets and political transformation in a number of Arab countries impacted fiscal positions of Arab countries in 2011. In particular, the surge in oil prices during the year and the resulting soaring in financial revenues of Arab exporting countries, led to expansion in government spending in these countries through high wages and salaries, high social transfers and other forms of current expenditures, in addition to expansion in public investment in 2011. In contrast, pressures have mounted on the fiscal position of the oil importing and more diversified Arab economies due to a swelling of government subsidies. Moreover, the Arab countries that recently witnessed political transformation adopted expansionary fiscal policies in response of public demands for increasing employment opportunities and enhancing social equality. Furthermore, the Arab countries with commercial ties with the OECD followed expansionary fiscal policies to

stimulate domestic demand and promote economic growth in view of the Eurozone sovereign debt crisis and the subsequent decline in demand for export of their main trading partners.

Public revenues and grants for Arab countries as a group increased by 26.2 percent equivalent to US\$ 892.4 billion in 2011. Moreover, the oil revenues, including oil and gas, grew at a rate of 34.2 percent to reach US\$ 653.8 billion, in addition to increase in tax revenues by 7.6 percent to reach US\$ 142.2 billion. The oil revenues represented 73.3 percent of the total revenues and grants in 2011. Public expenditure in Arab countries as a group expanded by 12.4 percent to reach about US\$ 798.1 billion in 2011. Current expenditure rose by 14.8 percent to reach US\$ 588.4 billion and capital expenditure increased to by 9 percent to reach US \$210.3 billion during the same year (Annex Table 6/1, 6/4, 6/5, 6/6).

The outcome of the previous developments was a surplus in general budget of the Arab countries as a group estimated at about US\$ 94.25 billion in 2011 compared to a budget deficit of US\$ 2.98 billion in 2010. The total budget surplus as percentage of GDP in Arab countries as a group was about 4 percent in 2011 compared to a deficit of 0.1 percent of GDP in 2010. Improvement in fiscal balance was mainly driven by the surplus achieved by the Arab oil exporting countries as a group that rose by US\$ 134.9 in these countries in 2011. At the same time, the budget deficit in the non-oil exporting countries widened to US\$ 39.84 billion during the same year (Annex Table 6/9).

Internal public debt outstanding balance of Arab countries as a group grew by 6.7 percent to reach US\$ 292.4 billion in 2011 in countries for which data is available. Moreover, external public debt outstanding balance rose by 1.8 percent to around US\$ 176.2 billion. As a result of these developments, the proportion of the internal public debt to total public debt (internal and external) increased slightly from about 61.3 percent in 2010 to 62.4 percent in 2011, while the proportion of the external public debt to total public debt fell from about 38.7 percent to about 37.6 percent during the same period. Finally, total public debt as percentage of GDP in Arab countries as a group declined from about 47 percent of GDP in 2010 to about 44 percent of GDP in 2011 (Annex Table 6/11).

## **(Chapter 7)** **Monetary, Banking and Capital Markets**

Monetary policy in Arab countries in 2011 continued to be expansionary in order to stimulate banking credit and support economic activity which was affected negatively by the slowdown of internal and external demand in many countries. Monetary policy was

dominated by precautionary approach as domestic liquidity grew at levels less than what was recorded in 2010. A number of direct and indirect monetary instruments have been used by the Arab central banks. These instruments varied significantly across countries in 2011. On the one hand, oil exporting countries witnessed a rise in liquidity levels due to increase in oil revenues. On the other hand, oil importing countries witnessed a decrease in liquidity in particular in countries experiencing political transformation. Consequently, central banks of oil exporting countries intervened to absorb excess liquidity and maintain exchange rate stability. In contrast, central banks in non-oil Arab countries with political transformation intervened continually to enhance liquidity.

With respect to factors determining domestic liquidity, net foreign assets were the leading factor responsible for changes in domestic liquidity in a number of Arab oil exporting countries due to the rise in oil prices in 2011. For the rest of the Arab countries, namely those affected by political transformation, rise in domestic liquidity was mainly driven by expansion of domestic credit to the government in order to finance the general budget deficit (Annex Table 7/1, 7/2, 7/3 & 7/4).

With regard to interest rates, many central banks in Arab region adopted fixed exchange rate system to keep interest rates in line with the low interest rates in the USA. In particular, for those Arab countries with wide margins between interest rates in domestic currency and in the USA dollar. Arab countries that witnessed political unrest resorted to restricted monetary policy raising interest rates as measures to support domestic currency and enhance local deposits in domestic currency.

The Arab banking system performance in 2011 was uneven. In particular, some of the Arab banks were affected negatively by political crisis in their own countries or in neighboring countries. Arab banks with relatively large exposure to the European banking system were influenced negatively by the Eurozone sovereign debt crisis though with a limited impact. However, strong capital of many banks in Arab region mitigated the negative effects of the Eurozone crisis (Annex Table 7/5, 7/6).

Despite improvement in banking sector aggregate indicators in 2011, credit facilities extended to the private sector increased by 8.7 percent above the level of the previous year. Yet, the growth rates of these facilities were lower than those advanced to public sector which amounted to 14.9 percent. This trend has emerged since the eruption of the global financial crisis. Deposits continued at its normal rates of growth. Total deposits of the private sector rose by 8 percent. Profitability indicators improved for most of the Arab banks despite

increases in allowances of non-performing loans except for banks in countries witnessing political unrest. On the other hand, foreign liabilities in Arab banks continued to decline in 2011 reflecting slowdown in international banking activity in developing countries including the Arab states. This retraction was observable from the beginning of the global financial crisis and was consolidated remarkably in 2011 (Annex Table 7/8).

It should be noted that the relative improvement in the aggregate indicators of the Arab banking system in 2011 was mainly due improvement in performance of the GCC banks as well as Jordan and Lebanon. The GCC banks benefited from increases in government spending, expansion in investment projects and improvement in disposable incomes in these countries.

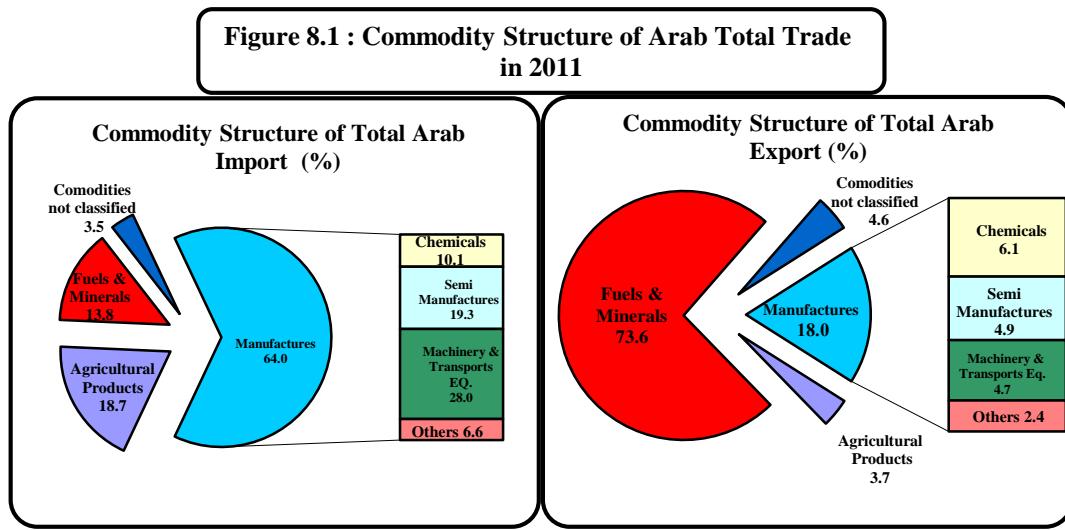

## **(Chapter 8)**

### **International and Intra-Regional Trade**

International trade of Arab countries was influenced mainly by favorable developments in global energy markets in 2011. Higher oil prices contributed to rise in Arab exports by 30.6 percent reaching about US\$ 1,196 billion. However, imports of Arab countries increased by 12.8 percent to reach US\$ 753 billion in relation to rising government spending in oil exporting countries and soaring oil prices for fuel and food importing countries. The share of Arab exports in the World exports increased from 6 percent in 2010 to 6.6 percent in 2011. This can be attributed to a faster export growth rate in Arab countries compared with the world export growth rates during the same year. By contrast, the share of Arab imports in the world imports declined slightly from 4.3 percent in 2010 to 4.1 percent in 2011 (Annex Table 8/1).

Trends of Arab trade in 2011 revealed a boost in the value of exports to all major trading partners of Arab countries at different levels. This was reflected in rise in shares of exports for most the trading partners. Similarly, Arab imports from all major trading partners rose except Japan. Developments in export commodity structure of Arab countries showed a growth in the share of fuel and non-fuel minerals and a contraction in the share of manufacturing goods encompassing chemicals, basic manufactures, machinery and transport equipment. The share of agricultural exports declined in 2011 compared with that in 2010. Developments in import commodity structure in Arab countries in 2011 indicated a decline in the share of manufactured imported goods. Within this group, machinery and transport equipment held the lion's share. In 2011, the share of the latter in the total value of Arab imports declined.

On the contrary, the share of the agricultural imports that rank second in Arab imports increased in 2011. In addition, the share of fuels and non-fuel mineral imports that ranked third in the import structure increased in 2011 (Annex Table 8/3 & Figure 8.1).

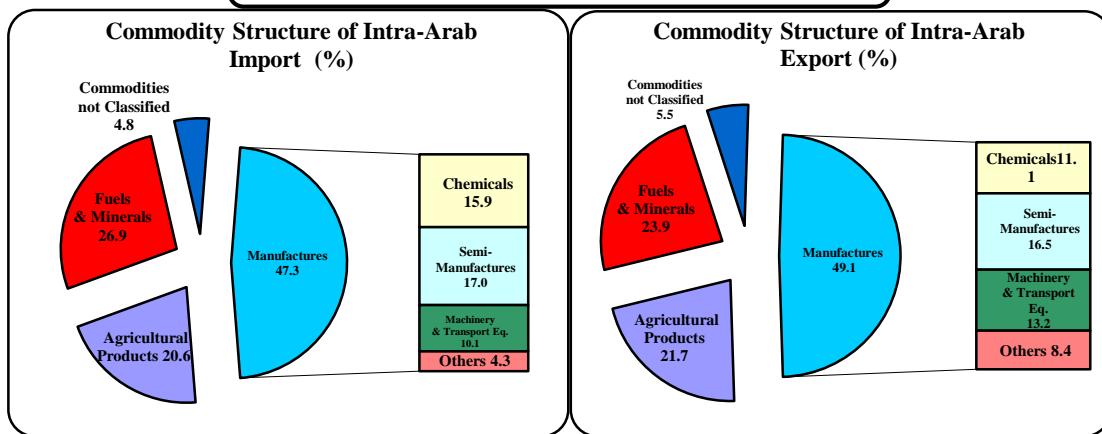

Source: See Annex Table 8/3.

With respect to Intra-Arab trade in 2011, the value of intra-Arab exports grew by 22.1 percent to reach US\$ 95.3 billion. However, total Arab exports grew faster than intra-Arab exports, resulting in a decline in the share of intra-Arab exports in total Arab export from 8.5 percent in 2010 to 8 percent in 2011. By contrast, the share of intra-Arab imports in total imports rose from 11.8 percent to 12.3 percent during the same period (Annex Table 8/5, 8/6).

Developments in intra-Arab trade commodity structure showed that the crude oil represented 11.3 percent of total value of Arab intra-trade reaching US\$ 10.6 billion. Agricultural commodities have the highest share in Arab non-oil intra-trade followed by basic manufacturing commodities, machinery and transport equipment, chemicals and other manufactures respectively. With respect to developments in the Greater Arab Free Trade Area (GAFTA) in 2011, member countries set up a manual for principles of unified Arab rules for competition and anti-trust. Arab delegates continued negotiation on trade liberalization of service sector within the Arab free trade area. In implementing the program for establishing the Arab customs union, work continued on setting timetables for a unified tariff for all Arab countries and agreement has been reached on standards of qualified customs ports within the framework of the Arab customs union (Annex Table 8/9 & Figure 8.2).

**Figure 8.2 : Commodity Structure of Intra Arab Trade  
in 2011**

Source: See Annex Table 8/9.

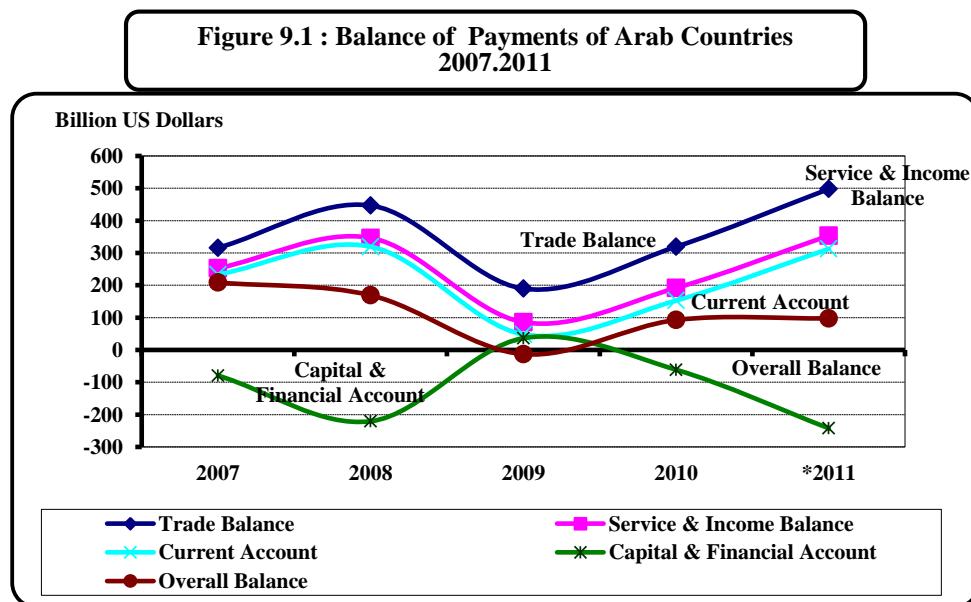

### (Chapter 9)

### Balance of Payments, Foreign Debts and Exchange Rates

Arab balance of payments performance was affected negatively by the incidents related to the political transformation in some of the Arab countries in 2011. These developments created a state of uncertainty that influenced the sources of revenues in the balance of payments of these countries. Despite a slow recovery in the world economy and decline in the growth rates of advanced and developing countries, the level of world demand for oil was stable and the oil prices remained high which impacted significantly on balances of payments of oil exporting countries.

As a result of the previous developments, trade balance surpluses in Arab countries as a group surged to a record high in the last three decades. These surpluses along with rise in deficits of services account and income account in the balance of payments (because of decline in revenues of tourism in countries witnessing political transformation) and net current transfers, the outcome of all these developments translated into a surplus in current account balance for the Arab countries as a group in 2011. This surplus was the highest since 2008 and more than double its previous value amounting to US\$ 312.7 billion. Capital and financial transactions witnessed an escalation in net outflows to more than three folds to reach US\$ 242.3 billion in 2011. This rise was attributed to the previous developments in the current account balance. Consequently, the overall balance of Arab countries recorded a surplus of US\$ 97.6 billion in 2011. This surplus was reflected in a rise in external reserves to US\$ 1,114.6 billion in 2011 compared to 1,008.3 in 2010. However, coverage of external

reserves to commodity imports receded marginally in 2011 to reach 19.7 months compared with 20.1 months in the previous year (Annex Table 9/1, 9/4, 9/5 & Figure 9.1).

Source: See Annex Table 9/1.

Regarding external indebtedness, the total external public debt in Arab countries as a group increased by 1.8 percent in 2011 to reach about US\$ 176.2 billion. A rise in external public debt in Arab countries was attributed to a rise in borrowing needs to finance budget deficit in most of these countries. At the country level, external indebtedness rose for most of the Arab countries such as Tunisia, Morocco, Sudan, Lebanon, Oman, Mauritania, Djibouti and Comoros. However, external indebtedness declined for Algeria, Syria, Yemen, Egypt and Jordan (Annex Table 9/6).

Interest payments for external public debt services for borrowing Arab countries rose by 8.7 percent in 2011 to reach US\$ 15.9 billion. Interest payments increased in Lebanon, Egypt, Tunisia, Morocco, Jordan, Yemen, Djibouti and Comoros. At the same time, it declined for Sudan, Syria, Algeria and Mauritania (Annex Table 9/7).

The ratio of external public debt to GDP in borrowing Arab countries as a group fell from 21.5 percent in 2010 to 20 percent in 2011 as a result of re-acceleration of economic activity in these countries. Moreover, the ratio of interest payments to commodity exports fell from 5.2 percent in 2010 to 4.9 percent in 2011 due to surge in exports revenue in some Arab countries (Annex Table 9/8).

With regard to exchange rate developments in 2011, the Arab currencies with fixed exchange rates against the US dollar witnessed relative stability in foreign exchange markets despite intervention from central banks to maintain the pegged currencies. On the other hand, the value of the Arab currencies with fixed exchange rates on the dollar against the Euro retracted due to the Euro gains against the dollar in 2011. The Arab currencies with floating exchange rates varied in their valuation against the dollar. While the values of the Tunisian Dinar, the Algerian Dinar and the Yemeni Riyal improved against the US dollar, the values of the Egyptian pound, the Sudanese pound and the Mauritanian ounce fell against the dollar in 2011. Real effective exchange rates declined for a large number of Arab countries in 2011 which was attributed to retraction in inflation rates in these countries compared with the rates of their main trading partners or for the rise in official interest rates of some countries (i.e., decline in the value of the local currencies) or for both factors. Eventually, both factors reflected a high level of competitiveness in some particular Arab countries.

#### **(Chapter 10)**

#### **Challenges and opportunities of access to banking, financial services and finance in Arab countries**

The thematic chapter of the Joint Arab Economic Report this year addresses the challenges and opportunities of access to financial services in Arab countries for individuals as well as for small and medium enterprises. Significance of this topic comes from the role of access to finance in achieving inclusive growth. Accessing finance and financial services by a large segment of the community for both individuals and SME's alike will boost economic activity, expand employment opportunities, and ensure equal allocation of economic resources among different social groups. All these factors promote the standard of livings and social welfare.

The chapter contained a number of observations, the most important of which are: Individuals accession to banking and finance services in Arab countries is the one of the lowest compared with regional groups and countries of the same income levels. Lending services in terms of the number of lending accounts for each 1000 adults in Arab region is about 201 lending accounts compared to an average of 258 in other developing countries. Consequently, lending services in Arab region is lower than other regions of developing countries. Therefore, accession of individuals to finance is one of the most prominent

challenges with respect to reactivation of the role of banking and financial sector in promoting inclusive growth in Arab countries.

In fact, many of the banking and financial institutions in Arab countries tended to benefit from modern technology to develop IT applications that reduce the cost of executing financial transactions significantly and allow for the extension of these services to a large segment of the population and widen geographic coverage in rural and remote areas. One of the most important IT applications is the expansion of banking services which are not based on banking branches such as spreading of ATMs and POS, in addition to adoption of e-banking technology that promotes mobile banking services. Furthermore, the post office is one of the most important modes of delivering financial services for individuals in Arab countries. The post office service is wide spread and covers different regions in particular in rural areas. Consequently, it represents one of the best means for providing financial services for individuals in rural and remote areas.

With regard to access to finance services, the chapter addresses both microfinance and housing finance. In terms of microfinance, the Arab region is characterized by a lower access to microfinance than other regional groups as the number of beneficiaries from this type of finance in Arab region in 2010 was about 2.2 million borrowers with an average micro-loan value of less than US\$550 during the same year. Micro projects represented more than 90 percent of total micro lending portfolio in most of the Arab countries. Microfinance lending in Arab countries covered only 2.4 percent of the working-age population which is a small percentage compared to other regional groups. Similarly, rural population access to microcredit is considered very low compared to other regional groups. Borrowers in rural population is less than 34 percent of total microcredit borrowers. Furthermore, female borrowers accounted for less than 50 percent of the total number of borrowers in Arab region in 2010 and this is the lowest share for female compared with other regions during the same year (Annex Table 10/1).

Microcredit in Arab countries is delivered through a variety of institutions consisting of both national and foreign non-government organizations, commercial banks, specialized banks, non-banking financial institutions, lending unions, and cooperatives operating mostly for non-profit objectives. In addition to a number of private companies that provide microfinance services on behalf of commercial banks, the microfinance institutions in the Arab countries rely on equity, loans and deposits as sources of financing. However, the equity, which often comes from charitable sources, is the main source of funding. This is in

line with the low commercial motive upon which the microfinance sector in the Arab countries is in general based.

A number of Arab countries adopted and implemented various financial reforms to develop the microfinance sector in the last few years. These reforms included enhancing institutional and regulatory frameworks in order to organize the operations of microfinance institutions, to determine their legal and financial status and to strengthen their business and profitability. In addition to creating a supportive environment for the operations of microcredit institutions by reducing restrictions to facilitate the easy flow of funding for investment projects, expanding micro-saving services, attracting commercial finance to the microfinance sector, promoting transparency and enhancing financial capabilities of microfinance institutions.

Within the framework of their joint efforts to support and develop the microfinance sector, the Arab countries set up, in the Arab Economic and Social Development Summit which was held in Kuwait during the period 19–20 of January in 2009, a special account for providing financial resources to finance and support small and medium-sized enterprises in the Arab countries, and assigned the task of administrating this account to the Arab Fund for Economic and Social Development.

With regard to access to housing finance services, the demand side for these services is growing rapidly in lights of several changes beginning with some demographic factors such as high population growth rates in Arab countries and a high percentage of young population, levels of urbanization (the proportion of the urban population to total population amounts to 63 percent on average), and trends of population preferences for housing ownership, in addition to other determinants related to conducive macroeconomic environment for rapid growth in the housing sector activities in Arab countries. As for the supply side of housing finance, mechanism for finance is restricted in most of the Arab countries to state finance directly or through state-owned specialized banks and commercial banks, and corporations of housing financing and re-financing. Despite the diversity of financing sources of housing in Arab countries, the state remains a major player in the housing finance market in a number of countries while the activity in the advanced countries is based primarily on market mechanisms (Annex Table 10/3).

In light of these findings, the chapter acknowledged the urgent need in the Arab countries to develop legislative and regulatory architecture for the housing market through the enactment

of advanced laws for housing finance. The chapter recommended the presence of adequate warranties for the enforcement of contracts in housing finance, and promoting a competent authorities to settle these cases and ensure speed decision and guarantee the rights of creditors. Furthermore, it is crucial for the Arab countries to continue in developing mechanisms for the registration of property, reduce the cost of registration in various regions, allow for reactivation of mortgage markets and reduce the risks associated with pricing in line with international best practices through the development of the credit query systems.

In addition, the Arab countries are called for increasing the levels of transparency of housing finance markets and microfinance projects through improving the levels of quality of data available on these two markets which would reduce the levels of risks and attract commercial financing for them.

Finally, developing the Islamic finance market by adopting an appropriate legal and regulatory framework would enhance the activity of the Islamic finance institutions to play a more active role in financing small and micro-projects and providing housing finance to broader segments of the populations in the Arab countries, in the light of the high levels of demand for this kind of services.

## (Chapter 11)

### **Arab Development Assistance**

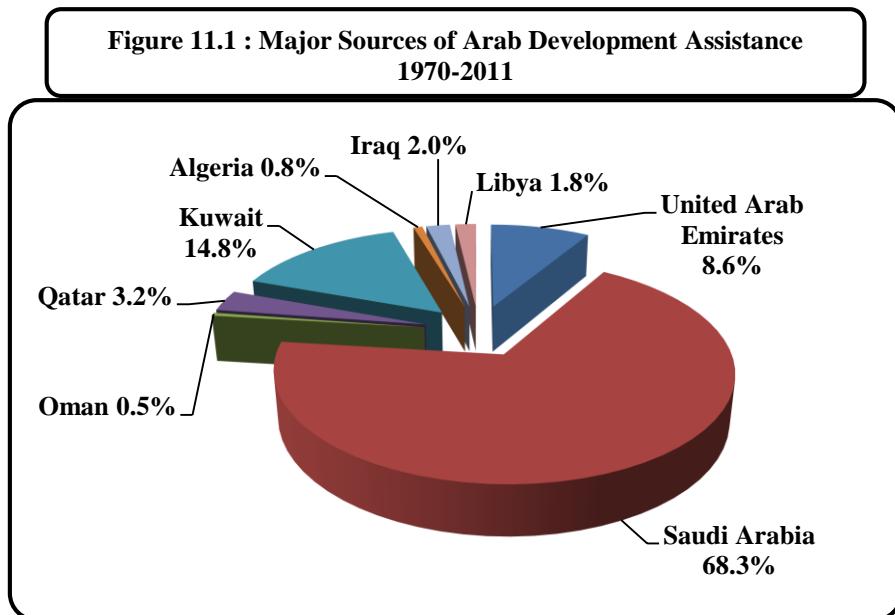

Arab development assistance represents a significant dimension of economic cooperation between Arab countries and the rest of the developing countries. The assistance consists of a major part of financial support offered to developing countries. This assistance is given through a grant element contained in loans extended, and grants which are normally made through a government Funds and through multilateral institutions in addition to charities and non-governmental organizations (NGOS) besides Arab countries contributions through international donor institutions.

Development assistance of Arab donor countries in 2011 was an estimated US\$6.3 billion<sup>1</sup>. The total development assistance by Arab donor countries during the period 1970–2011 reached US\$154 billion of which 147 billion equivalent to 95.4 percent was donated by the

---

<sup>1</sup> This includes total development assistance commitments offered by Saudi Arabia and net drawings of other countries.

GCC countries and 7.0 percent came from the rest of the Arab countries. Arab human development assistance represents 0.42 percent of gross national income of Arab donor countries in 2011 (Annex Table 11/1, 11/2, 11/3 & Figure 11.1).

Source: See Annex Table 11/1.

Arab development assistance in terms of loans extended by Arab National and Regional Development Institutions called the Coordination Group committee<sup>2</sup> was about US\$ 6.4 billion in 2011 compared to US\$ 7.5 billion in 2010 indicating a fall in the assistance by 14.8 percent. Of these loans, finance commitments to Arab countries amounted to 54.7 percent in 2011 compared to 53.6 percent in 2010.

The Coordination Group took the initiative in provision of necessary financial support for covering urgent needs and availing sufficient resources for development plans in countries witnessing political and social transformation in particular, support for employment programmes and small and medium projects in private sector. The Coordination Group

---

<sup>2</sup> The Coordination Group consists of nine institutions, three of which are national institutions including the Kuwait Fund for Arab Economic Development, the Saudi Fund for Development, the Abu Dhabi Fund for Development, and five regional organizations consisting of the Arab Fund for Economic and Social Development, Islamic Development Bank, OPEC Fund for International Development, the Arab Bank for Economic Development in Africa, the Arab Gulf Program for United Nations Development Organizations (AGFUND) as well as the Arab Monetary Fund.

Institutions joined the Deauville Partnership Initiative<sup>3</sup> which is an international effort launched by the G8 to support countries in the Arab world engaged in transitions toward “free, democratic and tolerant societies.” The Coordination Group pledged to support these countries.

Sectoral classification of finance operations for the Coordination Group Institutions in 2011 was as follows: Telecommunication and transport sectors received 27.3 percent of total commitments in this group of institutions, energy sector that consists of electricity, oil and gas received a share of 26.6 percent, services sector that consists of health, education, housing and support for balance of payments received a share of 16.1 percent, agricultural and livestock sector received a share of 4.5 percent and finally industrial and mining sector received a share of 1.8 percent (Annex Table 11/4, 11/6).

Contributions of Arab development institutions of member countries as accumulated total commitments by the end of 2011 was US\$109.9 shared as follows: the Islamic Development Bank (IDB) about 30.4 percent, the Arab Fund for Economic and Social Development (AFESD) about 22.2 percent, the Kuwait Fund For Arab Economic Development (KFAED) about 15.9 percent, the Saudi Fund for Development (SDF) about 9.6 percent, the OPEC Fund for International Development (OFID) about 8.6 percent, the Arab Monetary Fund (AMF) about 6.2 percent, the Abu Dhabi Fund for Development (ADFD) about 3.9 percent, and the Arab Bank for Economic Development in Africa (BADEA) about 3.2 percent (Annex Table 11/5).

## **(Chapter 12)**

### **Joint Arab cooperation**

#### **Arab Cooperation in Combating Desertification**

The majority of the Arab territories can be considered as desertified or threatened by desertification because of several factors including overgrazing and pastoral overloading that upset the natural balance between animal growth and reproduction of natural plants. Desertification resulted in shrinking of land use capabilities for agricultural development purposes thereby widening food gap and increasing reliance on imports to meet urgent food needs.

---

<sup>3</sup> The Partnership includes Canada, Egypt, France, Germany, Italy, Japan, Jordan, Libya, Kuwait, Morocco, Qatar, Russia, Saudi Arabia, Tunisia, Turkey, the United Arab Emirates, the United Kingdom, the United States and the European Union.

Field survey results within the framework of early warning project of land degradation showed that the total areas of land that endured degradation in the Arab region during the period (1982–2007) was about 658 million hectares, accounting for about 47 per cent of the total area of the Arab region. Similarly the degradation during the period (1999–2010) amounted to about 845 million hectares and represented about 60 per cent of the area of the Arab region. These results indicate a decline in agricultural land uses especially in terms of pastures and forests, and a contraction in rainfed agricultural areas.

The Arab countries made several efforts to combat desertification and limit its negative effects. At country levels, a number of Arab states implemented some essential activities to mitigate desertification and established environmental institutions that assigned priority to the implementation of policies that protect the environment. In addition to that, many Arab countries set up legislations covering a wide range of environmental fields.

With respect to the Arab joint cooperation in the field of combating desertification and land degradation, the early efforts go back to the beginning of the nineties of the last century when the Arab League established the Arab Center for the Studies of Arid Zones and Dry Lands (ACSAD) which is a specialized Arab institution aims at consolidating national efforts for developing scientific agricultural research in arid and semi-arid areas, and exchanging of information and experiences of Arab countries in order to promote agricultural production in these countries. Finally, at the level of Arab cooperation with other regions and countries that have successful experiences in combating desertification and land degradation, the Arab countries have established mechanisms for cooperation with the countries of South America in the field of environmental protection, and with China in the field of desert land reclamation and water management.

With finance extended by international and regional organizations such as IDA, IFDAD, UNDP, IDB FAO, etc, the Arab countries implemented many regional projects for combating desertification in the Arab region.

## **(Chapter 13)**

### **The Palestinian Economy**

The Palestinian economy continued to grow in 2011. The value of the GDP at current prices increased from US\$ 8.3 billion in 2010 to US\$ 8.8 billion in 2011 indicating a nominal growth rate of 5.3 percent allowing the GDP per capita to rise from US\$ 2186 in

2010 to US\$ 2232 in 2011. Moreover, the Palestinian GDP in constant prices, grew at a rate of 10.2 percent in 2011. However, the economic growth still relies heavily on inflow of foreign assistance and expansion in public spending (Annex Table 13/1).

Despite achieving a real economic growth during the period 2008–2011, unemployment rates in Palestine remains very high. Yet, this high level of economic growth did not alter the worsening situation and deteriorating prospects for long-term development in the occupied Palestinian territories. This is related to the continued Israeli occupation and the obstacles that constrain private sector activity and productive activities in Palestine. In addition to the concentration of the growth mainly in Gaza Strip that achieved an average rate of growth of about 25 percent in 2011 attributed mainly to high growth in reconstruction sector in relation to rebuilding Gaza after the Israelis aggression in 2008 and 2009 on the Strip.

On the other hand, the estimated poverty rates in the Gaza Strip, the Jordan Valley, East Jerusalem, and other isolated areas behind the apartheid wall that was built by the Israeli occupation authorities, by about 26 per cent of the Palestinian population in 2011.

Furthermore, 33 percent of the Palestinians lack food security, bringing the number of the Palestinian who rely on the international assistance in food security to about 1.4 million, of whom 800 thousands receive assistance from the World Food Program and about 840 thousand Palestinians receive their assistance from the agency of the United Nations Relief and Works Agency (UNRWA). In addition to other type of international assistance in particular in fighting poverty and providing temporary employment opportunities. These efforts contributed relatively in reducing chronic unemployment, poverty and lack of food security.

With respect to the Palestinian GDP sectoral developments in 2011, the agricultural output grew at a rate of 12 percent, the industrial output grew at a rate of 5.2 percent and the reconstruction sector grew at a remarkable rate of 169 percent which was mainly attributed to the reconstruction in Gaza Strip. The contribution of this sector to GDP was the highest since 1999 reaching 11 percent in 2011 compared to 4.5 percent in 2010. However, the services sector value added to the GDP declined by 4.5 percent due to retraction in activities of government, public administration, business and tourism.

Regarding banking sector developments, the ratio of credit facility to total deposits rose from 43.5 percent in 2010 to 52.4 percent in 2011 which was the highest ratio achieved since the establishment of the Palestinian Monetary Authority in 1994 (Annex Table 13/2).

In foreign trade, Israel continued to control the Palestinian trade as the Israeli market is still absorbing about 90 per cent of Palestinian exports. It is also the main source of Palestinian import supplying about 75 per cent of it in 2010.

Therefore, the trade deficit with Israel represented about 70 percent of the total trade deficit in Palestine, which is more than the total value of current transfers of the occupied Palestinian territories, equivalent to US\$ 2.7 billion, including grants and international aid to the Palestinian Authority.

According to the UNCTAD (2011), the Israeli exports to the Palestinian economy were not all of Israeli origin, a part of it came from a third source, and then re-exported to the Palestinian territories as Israeli products, which was estimated at about 58 per cent of total registered Palestinian imports from Israel. This means that the value of customs revenues collected by the Israel government when entering those products are not transferred to the Palestinian Authority. The average value of the lost tariff revenue was about USA\$ 500 million annually, representing about 8 per cent of the Palestinian gross domestic product (GDP). These are the revenues that could have covered about one-third of the Palestinian budget deficit, apart from the losses in output and employment. Had these financial resource been received, it would have been used to stimulate Palestinian economic activity (Annex Table 13/2).

The UNCTAD report recommends an establishment of a mechanism to distinguish between the direct imports of Israel (Israeli products origin) and indirect imports from Israel (products coming from a third party), for not wasting those economic resource and depriving the Palestinian economy for the benefit of the Israeli economy and its treasury.

## **Annex Tables**

**Annex Table (2/19) : Summary of Development Indicators in the Arab Countries**

<b>Indicator</b>	<b>Year</b>		
Population, urban (% of total)	2011	56.7	%
Population ages 0 -14 (% of total)	2010	33.8	%
Population ages 15-65 (% of total)	2010	62.6	%
Population ages 65 and above (% of total)	2010	4.1	%
Illiteracy rate, adult total (% of people ages 15 and above)	2009	27.3	%
Illiteracy rate, adult male (% of males ages 15 and above)	2009	18.6	%
Illiteracy rate, adult female (% of females ages 15 and above)	2009	36.5	%
Illiteracy rate, youth total (% of people ages 15-24)	2009	12.1	%
Illiteracy rate, youth male (% of males ages 15-24)	2009	8.7	%
Illiteracy rate, youth female (% of females ages 15-24)	2009	15.6	%
Total enrollment, primary (% net)	2009	85.6	%
Total enrollment, primary, Male (% net)	2009	86.9	%
Total enrollment, primary, Female (% net)	2009	84.3	%
Expected years of schooling in primary education , Total	2011	10.2	Year
Expected years of schooling in primary education , Male	2009	11.7	Year
Expected years of schooling in primary education , Female	2009	11.5	Year
Dropout rate in primary education , Total	2007	3.3	%
Dropout rate in primary education , Male	2007	3.6	%
Dropout rate in primary education , Female	2007	3.0	%
Public expenditure on education as a percentage of GNP	2008	4.2	%
Public expenditure on education as a percentage of total public expenditure	2006	19.8	%
Life expectancy at birth, total (years)	2011	70.5	Year
Total fertility rate, (births per woman)	2011	3.1	Child
Mortality rate, infant (per 1,000 live births)	2009	36.7	Child
Mortality rate, under-5 (per 1,000 live births)	2010	49.0	Child
Total expenditure on health as a percentage of GDP	2009	5.1	%
Public expenditure on Health as a percentage of total expenditure on health	2009	61.4	%
Improved water source (% of population with access)	2009	84.2	%
Improved water source, urban (% of urban population with access)	2009	86.5	%
Improved water source, rural (% of rural population with access)	2009	74.2	%
Improved sanitation facilities (% of population with access)	2009	76.6	%
Improved sanitation facilities, urban (% of urban population with access)	2009	81.8	%
Improved sanitation facilities, urban (% of rural population with access)	2009	64.6	%

\* Preliminary estimates.

- Canada's oil reserves exclude unconventional reserves such as oil sands.

- World's oil reserves exclude Bitumen and extra heavy oil in Venezuela.

- 50% of the Divided Zone's oil reserves is added to each of Saudi Arabia and Kuwait oil reserves.

(1) The rate applied to all public sector transactions. Since 2000, the rate was the free market foreign exchange rate, set to reflect developments in the free market exchange rates offshore in the neighboring countries. Effective 2007, the reported exchange rate which unified the exchange rates was called (market exchange rate of foreign currencies).

(2) The average annual percent change was calculated on the basis of national currency units per US dollar; assign (-) stands for appreciation of the value of the national currency.
